

WHAT IS CLAIMED IS:

1. A seat belt pretensioner, comprising:

a pretensioner main body which generates a tension force by reacting with a deceleration of a vehicle exceeding a constant value, the pretensioner main body disposed at a side of a seat cushion;

a moving member connected to an end of a seat belt;

a wire which connects the pretensioner main body with the moving member and transmits the tension force therethrough to the seat belt to pull the seat belt; and

a containing cover which covers the moving member and the wire;

wherein the containing cover includes a lower portion attached to the pretensioner main body and an upper portion having a through port for allowing the end of seat belt to pass therethrough.

2. The seat belt pretensioner according to claim 1,

wherein the upper portion has a tacking portion in which the seat belt is tacked to the containing cover; and

the tacking portion is broken by the tension force when the seat belt is pulled.

3. The seat belt pretensioner according to claim 2,

wherein the tacking portion includes a seaming string
which tacks the seat belt.
